Organic Chemistry Research. About this Journal. Organic Chemistry Research is an international peer-reviewed, open access journal that covers all aspects of organic chemistry. The journal publishes original papers of high scientific level in the form of Full Papers, Short Communications and Reviews.

### **Organic Chemistry Research (ORG.CHEM)**

The following outline is provided as an overview of and topical guide to organic chemistry: . Organic chemistry - scientific study of the structure, properties, composition, reactions, and preparation (by synthesis or by other means) of carbon-based compounds, hydrocarbons, and their derivatives. These compounds may contain any number of other elements, including hydrogen, nitrogen, oxygen ...

### **Outline of organic chemistry - Wikipedia**

Green chemistry, also called sustainable chemistry, is an area of chemistry and chemical engineering focused on the designing of products and processes that minimize or eliminate the use and generation of hazardous substances. While environmental chemistry focuses on the effects of polluting chemicals on nature, green chemistry focuses on the environmental impact of chemistry, including ...

peCOD is the fastest available method for quantifying oxygen demand (OD), providing operators with real time data needed to make timely, impactful decisions that enhance environmental

protection while generating substantial savings on chemical and energy use.

### **Oxygen Demand Analyzer - Mantech**

Participate in the scientific program of ISGC 2019 The call for abstracts is open until November 30th 2018. +300 oral communications will be selected for the scientific program.

### **ISGC**

Photochemical reaction: Photochemical reaction, a chemical reaction initiated by the absorption of energy in the form of light. The consequence of molecules' absorbing light is the creation of transient excited states whose chemical and physical properties differ greatly from the original molecules. These new chemical

### **Photochemical reaction | chemical reaction | Britannica.com**

Photosynthesis: Photosynthesis, the process by which green plants and certain other organisms transform light energy into chemical energy. During photosynthesis in green plants, light energy is captured and used to convert water, carbon dioxide, and minerals into oxygen and energy-rich organic compounds.
