

*International Handbook Of Earthquake And Engineering  
Seismology Part B*

## **International Handbook Of Earthquake And**

An earthquake (also known as a quake, tremor or temblor) is the shaking of the surface of the Earth, resulting from the sudden release of energy in the Earth's lithosphere that creates seismic waves. Earthquakes can range in size from those that are so weak that they cannot be felt to those violent enough to toss people around and destroy whole cities.

Who While it primarily targets journalists and aid providers, the handbook can be used by anyone. Its advice and guidance are valuable whether you are a news journalist, citizen reporter, relief responder, volunteer, journalism school student, emergency communication specialist, or an academic researching social media.

The G-EVER Consortium among the Asia-Pacific geohazard research institutes was established in 2012. The first Workshop of Asia-Pacific Region Global Earthquake and Volcanic Eruption Risk Management was held in Tsukuba, Japan in Feb. 2012. The workshop focused on strategies formulation to reduce disaster risks worldwide caused by earthquakes, tsunamis and volcanic eruptions.

The New Zealand Waste Strategy defines waste as: "any material, solid, liquid or gas, that is unwanted and/or unvalued, and discarded or discharged by its owner". As we saw in Section 1, in many cases what people call waste is capable of being re-used. There is also value in that re-use, especially if you think of the environmental impacts of simply discarding it.
