Goals of Time Series Analysis. Time series analysis can be used to accomplish different goals: 1) Descriptive analysis determines what trends and patterns a time series has by plotting or using more complex techniques. The most basic approach is to graph the time series and look at:

Over the last few years we've looked at various tools to help us identify exploitable patterns in asset prices. In particular we have considered basic econometrics, statistical machine learning and Bayesian statistics. While these are all great modern tools for data analysis, the vast majority of ...

The GISTEMP time series is a reconstruction of global surface temperature based on land and ocean data. The x-values are the temperature anomalies relative to the 1951–1980 mean in units of degrees Celsius. The t-values are the years from 1880 to 2017. This is an evenly spaced series of size $n = 138$, and the time resolution is 1 year. The method of calculation of GISTEMP from a number of records ...

Economists face method selection problem while working with time series data. As time series data may possess specific properties such as trend and structural break, common methods used to analyze other types of data may not be appropriate for the analysis of time series data.

Modern portfolio theory (MPT), or mean-variance analysis, is a mathematical framework for assembling a portfolio of assets such that the expected return is maximized for a given level of risk. It is a formalization and extension of diversification in investing, the idea that owning different kinds of financial assets is less risky than owning only one type.

In mathematics, Fourier analysis (*f* *o* *u* *r* *i* *e* *r*, *-i* *e* *r* *f*) is the study of the way general functions may be represented or approximated by sums of simpler trigonometric functions. Fourier analysis grew from the study of Fourier series, and is named after Joseph Fourier, who showed that representing a function as a sum of trigonometric functions greatly simplifies the study of heat transfer.
