Turbulent Combustion Modeling Advances New

Turbulent combustion sits at the interface of two important nonlinear, multiscale phenomena: chemistry and turbulence. Its study is extremely timely in view of the need to develop new combustion technologies in order to address challenges associated with climate change, energy source uncertainty,

Advances and challenges in modeling high-speed turbulent combustion in propulsion systems. ... Is a turbulent-combustion model needed to simulate high-speed combustion ... The advantage of this formulation is that it does not add any new reduced parameters and, thus, allows use of simple PDFs. However, although it may work in some applications ...

The main issues and related closures of turbulent combustion modeling are reviewed. Combustion problems involve strong coupling between chemistry, transport and fluid dynamics. The basic properties of laminar flames are first presented along with the major tools developed for modeling turbulent combustion.

Therefore models are used to simulate for a realistic size combustion chamber. The relatively new Multiple Mapping Conditioning (MMC) model has been developed and validated for certain cases. It is derived from the Conditional
