### **Volcanoes Mountains That Blow Their**

A volcano is a rupture in the crust of a planetary-mass object, such as Earth, that allows hot lava, volcanic ash, and gases to escape from a magma chamber below the surface.. Earth's volcanoes occur because its crust is broken into 17 major, rigid tectonic plates that float on a hotter, softer layer in its mantle. Therefore, on Earth, volcanoes are generally found where tectonic plates are ...

North America - The marginal mountains: Erosion also profoundly altered the marginal mountains. The Appalachians have been planed down to such an extent that their crest lines are smooth-topped for hundreds of miles. In Canada the highest level lies at about 4,000 feet (1,200 metres), in the flattops of the Shickshocks (French: Chic-Chocs); another level exists at 2,000 feet (600 metres) on ...
