11 Answers. Foreign keys also allow you to define cascade rules, which e.g. can be used to delete associated records in related tables when a row in one table is deleted. Only if you have ridiculously high loads should you consider bypassing FKs. Edit: updated answer to include points from other answers (reports, cascades).

### **Do you absolutely need foreign keys in a database? - Stack ...**

You may also set this column to auto increment; but the most important component is the primary key. Why do I need to use a primary key? Well, even though the column set as a foreign key may have duplicate data in multiple rows, it is still relying on the unique information in the primary key. If there was non-unique rows in the primary key ...
